COURSE DESCRIPTION
<p>This course provides an introduction to fundamental concepts in finance. The main objective is to develop a set of tools for analyzing the investment and financing decisions of individuals and firms. More specifically, the course is organized around three main concepts.</p> <ul style="list-style-type: none"> Present Value: Real and financial assets can be represented by streams of cash flows. This portion of the course studies how to describe and value these assets. Diversification and Risk: Assets differ in their risk level. This portion of the course provides a systematic framework for analyzing the tradeoff between risk and return and for incorporating its implications into the valuation of assets. Investment Decisions: Individuals and firms must often make decisions about how to allocate their capital to various investments. This portion of the course studies the implementation of all of the course's tools in several financial decision-making contexts. <p>We will also talk about how to value start-ups or new firms which do or do not have comparable. Moreover, towards the end of the semester we will also briefly talk about how the financial development of an economy impacts its macroeconomic aggregates in the context of Pakistan.</p>
